

Technical Data Sheet

Burdett's Bairnsdale Toppings

Sourced from South East Victoria, Burdett's Bairnsdale Toppings are a mid-brown granitic sandy gravel suitable to use for driveways and pathways.

With suitable compaction, such as a vibrating plate Bairnsdale Toppings will provide a firm base. For an even more durable surface, they can also be stabilised with cement at 3 – 5%.

Bairnsdale Toppings should ideally be placed at a depth of 50 – 75 mm over an equivalent thickness of solid base such as crushed rock.

Note: Colour and sizing may vary as this is a natural product.

As delivered	After rain or washing
	
Nominal size: 10 - 20 mm	

Note: Bairnsdale Toppings contain a significant amount of silt & clay which is integral to the nature of the product. This provides the ability to form a durable surface after compaction, particularly if cement stabilised. Note that appearance will improve over time after natural washing by rain or can be amended quickly by spraying with a garden hose.

Bairnsdale Toppings are available in bulk ex-bin or delivered.

Please contact sales for detailed information on availability and pricing.
